

# Trivec PaintRobot

## Trivec PaintRobot Efficient and economical

The PaintRobot is a handy piece of equipment that can be used to impregnate or stain long planks of wood or provide them with a coat/undercoat of paint on all sides (for example) quickly, easily and in one go. It can be adjusted quickly and easily to suit the part that needs to be treated. Compared to painting by hand with a brush or roller, you will save a huge amount of costly labour time. Working with the PaintRobot is efficient and economical; it collects all excess paint for reuse.

## Planking painted on all sides

### The benefits:

- Virtually no paint lost
- Flexible and quick to use
- Four-sided painting in one go
- Working in an environmentally friendly manner
- Practical way of working
- Easy to operate
- Saves a huge amount of time

# Well thought-out solutions in the application of paint

## A glimpse 'under the bonnet'

### Trivec PaintRobot technical details

#### Application

Dim. folded away (lxwxh)

Dim. opened out (lxwxh)

Up to four sides

1400 x 600 x 450 mm

1700 x 600 x 1150 mm

#### Options

- Extra set of brushes for widths > 100 mm
- Extra roller set for widths > 200 mm
- Oblique brush-holders

Dimensions of parts to be painted/treated maximum (wxh)

300 x 120 mm

### Treating surface in one go

The PaintRobot has been developed to impregnate, stain or resin planking or provide it with a coat/undercoat of paint on all sides in a single run. By adjusting the settings, parts can be treated on 1-4 sides in one go.

### Quick and easy to use

The PaintRobot is simple to open out and fold away. Folded into a handy size, the PaintRobot can be transported easily.

Ideal and quick to use for in the workshop or on-site at the client's home or place of business.

### 1000-1250 metres per hour

Assuming you are well-organized in your work (e.g. supply and removal of parts, use of drying racks/carts), production of 1000-1250 metres per hour is feasible.

### Well thought-out simplicity

Tailoring use of roll and brush-

holders to the part is straightforward. Assembly bridges to which rolls and brushes are attached can easily be removed for the purposes of changing and/or cleaning.

### Saving time and money

Compared to painting by hand, the PaintRobot saves you a huge amount of expensive labour time. Furthermore, you will prevent considerable amounts of paint being lost as a result

of overspray when spraying by hand or machine.

### Can be used for:

The PaintRobot is used for the treating of planking (among other things), including rabbit/tongue-and-groove planking, priming casement frames, skirting boards and cornices, staining/preserving planed or fine sawn wood for cladding and for use in gardens, etc.
